Issues & Recommendations

The issues identified in the Health Check are summarized below. Each issue indicates whether it pertains to the existing health of the system or the risk of future issues. Each issue is also assigned a severity level based on the impact to the system:

Configuration Score Card

Current Health / Future Risk

Application Configuration

Issue 1: Entire Table Cache for big tables	
Issue Type: Health	**Issue Severity:** High
Entire Table Cache for tables > 96 KB (14 tables found) Don't set "entire table" cache to big tables. Change with appropriate table cache type according to tables' usage. These changes should be tested before configuring them in to the production environment.	

Issue 2: Configuration keys	
Issue Type: Health	**Issue Severity:** Medium
Configuration keys (Key Update Objects) should be disabled This will disable the fields and tables prefixed by DEL_. These fields and tables were kept from version AX 5.0 after upgrade, and after a while it is advised to discard them for performance reasons.	

AOS Server

Issue 1: Monitor AOS Eventlog	
Issue Type: Health	**Issue Severity:** High
Event ID 110. Error in Services Framework We recommend monitoring the Eventlog and act on errors.
